Research Interests

- Large Language Models; Efficient Post-Training; Parameter-Efficient Adaptation; LLM Reasoning
- Evolutionary Optimization; Automated Algorithm Design

Education Background

- **Bachelor of Engineering in Software Engineering** *Expected 2027*
Harbin Institute of Technology, Weihai
Average Grade: **82.31/100**

Honors & Awards

- **People's Scholarship, awarded for academic excellence**, Harbin Institute of Technology
- **Outstanding Student Award**, Harbin Institute of Technology

Research Experience

- **Research Assistant, Southern University of Science and Technology** *Dec.2025 – Present*
Advisor: Prof. Zhenkun Wang
 - Investigated gradient-free post-training for large language models by comparing Evolution Strategies (ES) with Group Relative Policy Optimization (GRPO). Experimental results showed that ES better preserved reasoning-trajectory diversity and improved pass@k performance. The resulting manuscript has been **submitted to AAAI 2027**.
 - Studied LoRA- and SVD-based parameter-space compression for efficient LLM adaptation, analyzing performance–compression trade-offs and the contributions of different singular subspaces to identify more effective low-dimensional search spaces.
- **Research Intern, Huawei Noah's Ark Lab** *May.2026 – Present*
 - Actively contribute to the ongoing development of **LLM4AD-NEXT**, an open-source agent platform for LLM-driven automated algorithm design and evolutionary optimization, by developing and refining extensible end-to-end workflows that integrate multiple automated heuristic-design methods and improve their configurability, evaluation, comparability, and extensibility.

English Proficiency

- College English Test Band 6 (CET-6): **558**
- College English Test Band 4 (CET-4): **603**
